**LEVELTEK INTERNATIONAL BEGINS OFFERING STRETCH LEVELERS
FOR CUT-TO-LENGTH LINES**

Benwood, WV, July 25, 2008 – Leveltek International has developed proprietary stretch leveling technology that allows metal processors to cut sheets which meet fabricators’ increased demands for memory-free steel required by laser and plasma cutting.

“Our stretch levelers are turnkey solutions that enable new or existing cut-to-length lines to handle light and heavy-gauge product, including HSLA grades.” says Nick Yavelak, president of Leveltek International. “These various types of steel require stretching to near-perfect, memory-free flatness.”

Leveltek Stretch Levelers offer numerous features and benefits, including high reliability, simple design, fast modular installation, real-time feedback and standard parts.

About Leveltek International

Leveltek International designs, manufactures and installs stretch leveling systems for retrofit and new light to heavy-gauge cut-to-length and coil-to-coil lines. The Company was established in 1997 and has installations worldwide. Leveltek International is headquartered in Benwood, WV, about 60 miles (100km) west of Pittsburgh.
