**Leveltek International to provide  
stretching machine to alloys manufacturer**

Leveltek International is proud to be the creator and provider of Haynes International's latest piece of technology, a state-of-the-art stretch leveling machine.

Haynes International, a leading manufacturer of metal alloys, recently celebrated its 100th anniversary in Kokomo, Indiana. The company is in the process of expanding its operations in Kokomo, investing \$23.5 million to expand its flat product capacity. As part of its expansion, Haynes this month will begin purchasing new machinery and equipment, including Leveltek's stretch leveling machine.

Leveltek CEO Mike Kelly said he is pleased to have the opportunity to work with Haynes. "We are happy to be able to provide Haynes with our custom leveling technology, and know it will bring them continued growth and success in the years to come," he said.

Leveltek designed the 1600-ton stretcher specifically for Haynes' Nickel and Nickel-Cobalt alloys, and it can handle material up to 72" wide and 1.5" thick. Leveltek will provide all engineering, equipment, hydraulic, electric, and mechanical systems necessary to install the machine at the Haynes Indiana facility over the next thirty-six weeks.
